

Assignment: Personal Information Collector

Objective: Write a Python script that asks the user for various personal information, stores the information in variables, and then prints a summary of that information.

Requirements:

1. Ask the user for their name (string).
2. Ask the user for their age (integer).
3. Ask the user for their height in meters (float).
4. Ask the user if they are a student (yes/no question, store as boolean).
5. After collecting this information, print a summary that includes their name, age, height, and student status.
